

Christmas Lantern Kit

With Step by Step Instructions

No cutting required (except for tissue), just supply your own PVA adhesive and Wood Glue

Includes: Base, Top, 4 x Uprights, Hook and LED Candle & 'Wet Strength' Tissue.

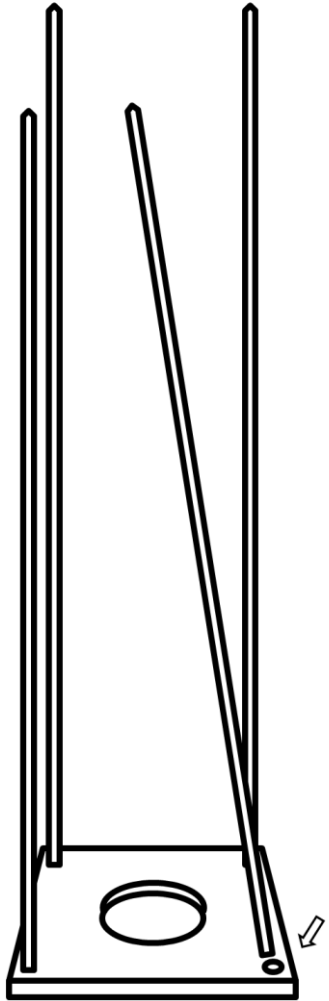

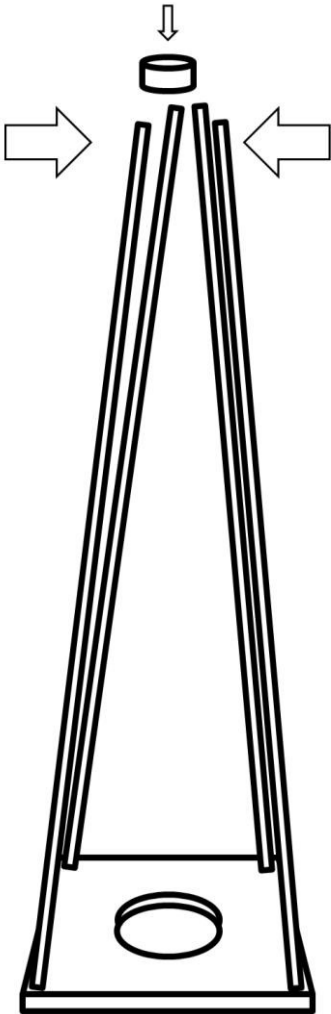

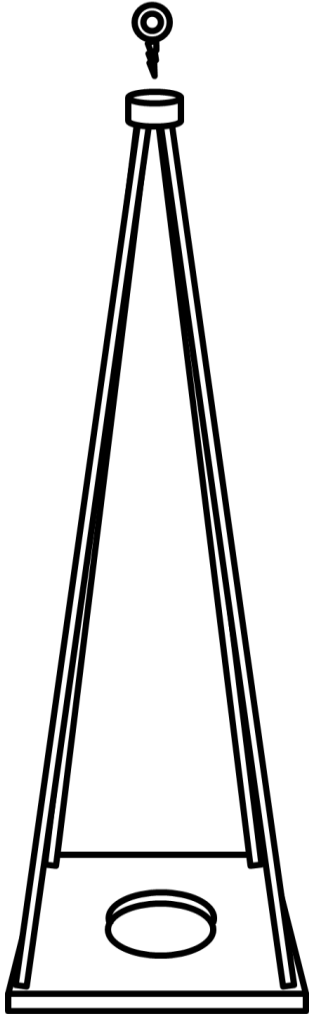

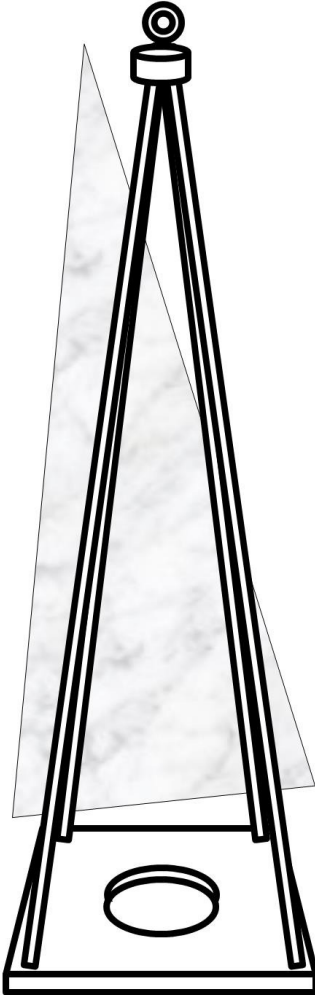

Made by:

In association with:

Lions Club of Winslow

Step 1	Step 2	Step 3	Step 4	Step 5
				
<p>Clear a suitable work area.</p> <p>Make sure you have all the pieces to hand: Base, Top, 4 x Uprights, Hook and Tissue.</p> <p>Glue the uprights into the pre-drilled holes in the Base. (Keep the tapered ends at the top).</p>	<p>Carefully place wood glue in to one side of the holes of the 'Top' and bring uprights together and slide into the holes.</p> <p>Push down gently and hold tight until the glue holds.</p>	<p>Screw in ring for suspending the Lantern. (It is easier to do now as you have something to hold when it is covered in glue)</p> <p>Cut the Tissue into the sizes of the sides. Allow some overlap to the top, bottom and to wrap around the uprights.</p>	<p>Mix up PVA adhesive with equal quantities of water and use a sponge to cover one side of the Tissue.</p> <p>Drape onto the structure and ensure it has good contact with Top, Base and Uprights. Try to remove any creases.</p>	<p>Leave to dry and decorate.</p> <p>When complete, insert the LED Candle from underneath and push hard to secure it in place.</p> <p><i>Stand back and admire your Paper Lantern!</i></p>
